

Kalshi Study PDF Pack - Start Here

Created 2026-04-27. For learning only; not financial, legal, or tax advice.

How to use this pack

- Read Kalshi official documents first: fee schedule, member agreement, rulebook, Klear rulebook, and developer agreement if you use the API.
- Then study event-contract mechanics: binary contracts, settlement rules, source agencies, fees, order books, liquidity, and market outcome review.
- Build probability and forecasting skill: base rates, conditional probability, expected value, calibration, and inference.
- Pick one market niche and learn its official data source deeply. Macro markets need BLS, BEA, Fed, and release-calendar discipline.
- Keep a pre-trade journal: market rule, settlement source, market price, your probability, edge after fees/spread, max loss, and post-settlement review.

Folder contents

Folder	Use it for
01_Kalshi_official	Kalshi rules, fees, member agreement, clearing, privacy, and API terms.
02_Prediction_markets_and_regulation	CFTC event-contract and prediction-market overview.
03_Probability_statistics_forecasting	Open probability and statistics textbooks.
04_Macro_and_data_sources	Official BEA/BLS methodology for macro markets.
05_Links_and_notes	Links, copyright notes, and manifest.

Books/resources linked but not copied

Commercial books such as Superforecasting, The Signal and the Noise, Thinking, Fast and Slow, Trading and Exchanges, and Fooled by Randomness are not included as PDFs because I did not find authorization to redistribute them. Use a library, publisher page, or legitimate retailer.

Forecasting: Principles and Practice, 3rd edition is free to read online at <https://otexts.com/fpp3/>, but I linked it rather than packaging a copied PDF because I did not find an official downloadable PDF version on the source page.

Pre-trade checklist

- Exact market question and strike.
- Full rules and settlement source.
- Trading close time and determination time.
- Current bid, ask, spread, and depth.
- Your probability estimate and evidence.
- Expected value after fee and spread.
- Position size and maximum loss.
- Information that would make you exit.
- Insider/conflict check.
- Post-settlement forecast review.
